## useit®-Superpad P

useit-abrasives® - this brand name stands for high-quality sanding media. The patented useit®-Superpad P will solve your sanding problems when working with many different types of material and guarantees optimum surfaces.

### An innovative design

In contrast to conventional sanding pads, useit®-Superpad P is perforated across its entire surface. This allows the sanding dust that is produced to be removed by suction permanently and across the entire surface. Sanding is almost dust-free. The likewise patented Velcro-type system on the rear side of the sanding medium allows the sanding dust to be removed between the backing plate and the sanding disc, thereby significantly reducing the amount of dust at the workplace.

### Optimum sanding results

With its perforations, useit®-Superpad P particularly prevents clogging. This keeps contact and removal to the optimum.

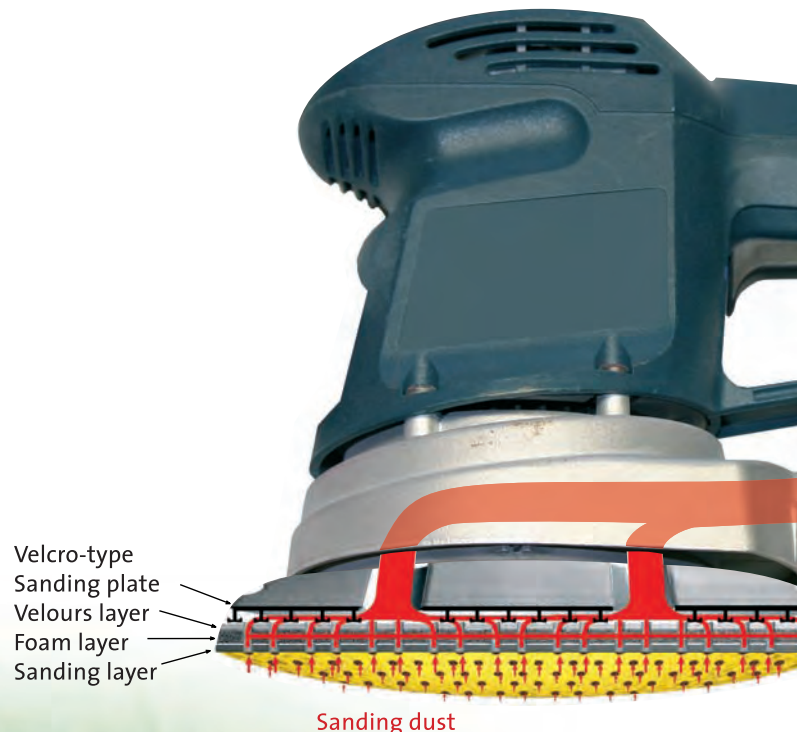

### Effective working

useit®-Superpad P has up to four times more sanding capacity compared with conventional perforated sanding media. This allows a shorter sanding time and more effective working.

### A universal solution

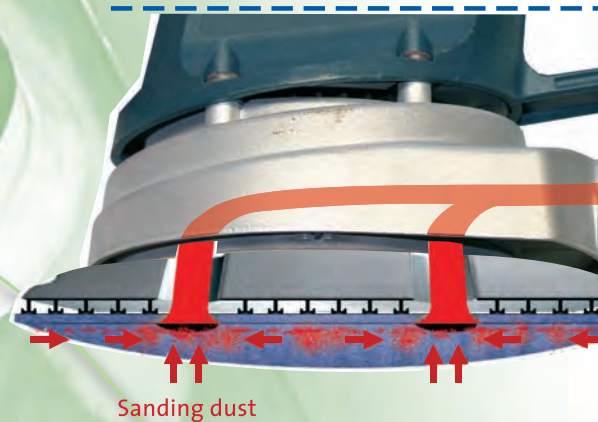

useit®-Superpad P not only has revolutionary properties, it also fits on all manual sanders, with or without suction removal.

useit-abrasives® reduce storage costs to a minimum. This means that this new-generation sanding idea is not only more effective, it also saves costs.

Sanding dust

**useit®-sanding system:**  
permanent dust suction removal  
across the entire sanding surface

Sanding dust

Conventional sanding system

**Almost dust-free**

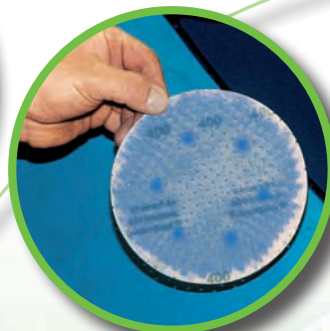

Thanks to the new structure of useit®-Superpad P, the sanding dust is removed by suction quickly and effectively.

- *Suction removal*
- *Cooler sanding*
- *No clogging*
- *Greater surface sanding capacity*
- *100 percent availability*
- *Low storage costs*

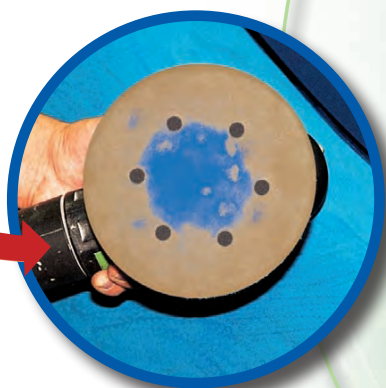

**Suction removal across the entire surface**

No clogging thanks to constant suction removal of the sanding dust.

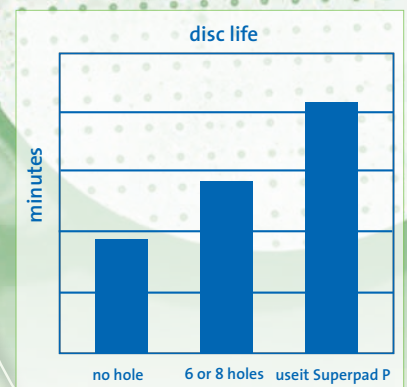

**Convincing results**

The patented Velcro-type layer allows permanent, clean suction removal on the rear side.

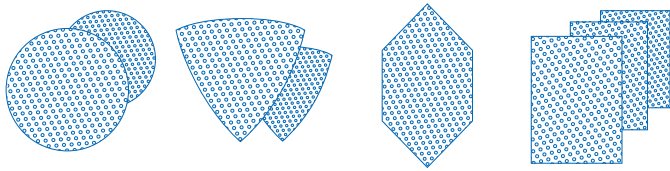

**Conventional perforated sanding disc**

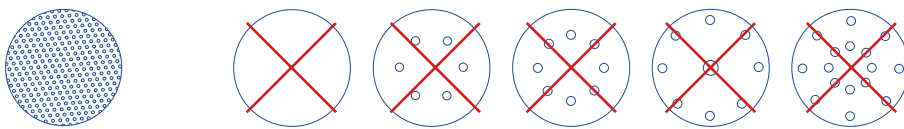

- Clogged
- Lower sanding capacity
- No optimum sanding result

Just these few useit®-multi-hole pads  
ensure constant availability!

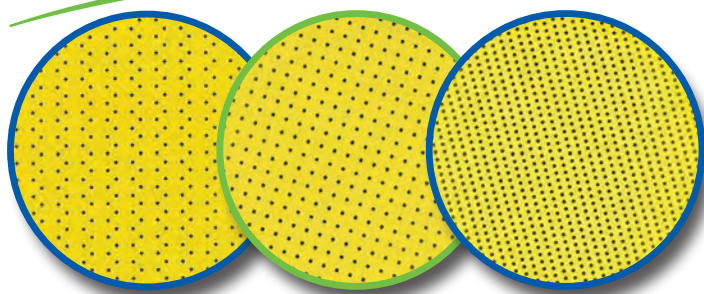

The Velcro-type sandpaper useit®-Superpad P from JÖST abrasives fits anywhere, irrespective of the different hole pattern and number of holes in the backing plates. This ensures 100 percent availability and major savings in storage costs.

No particular backing plate necessary.  
Suitable for all current machines:  
Bosch, AEG, Metabo, Kress, Festo, Fein, Flex...

**100% delivery readiness  
at minimum stockkeeping**

In contrast to conventional perforated sanding media, the patented useit®-Superpad P allows the ratio of perforated surface to sanding surface to be optimised, depending on the material and the amount of dust produced.

US-Patent 5,810,650  
Europa-Patent 0781629
